## What a professional portrait photo looks like:

1. Data: Photos with at least 5x6 cm and 300dpi (aproximately 600x700 pixel).
2. Pictures taken in a professional photographic studio.
3. Pictures taken with indirekt lighting .
4. Calm surfaces (bright or dark) in the backround.
5. Appropriate clothing: festive and monochrome.
6. eye-contact with the viewer: The eyes should be at least open!
7. With or without instrument.

## A few good examples:

## What not to do:

1. Casual Clothing ( thick sweaters, „funny" designs, etc.).
2. Vacationssights, furniture, etc. in the backround.
3. Backlighted foto ( dark face in front of a bright backround).
4. Direkt flashlight/ sunlight (leads to shadows in the face).
5. Photos taken in a dark room.
6. undersized files/ too much JPG-compression.
7. NO paperprints send by letter.

## By the way:

The photos in our programme are also being seen by potential employers.
It's best, we use it for a good presentation of ourselves.

Pictures taken in a professional photo-studio are not expensive.
 The photos can easily be sent to us in the right format (design@spiesz.de).

We can perform our volunteer work much easier and faster, if we can work with good photos.
Bad photos take us a lot of time.
Thank you very much!
